# Micrograph laboratory **Microlab ML 3600**

Tabletop laboratory for cross-section analysis

*With the Microlab you can prepare microsections of crimped contacts in a very professional and economic manner.*

The Microlab product family is designed to prepare cross sections of conductor crimps and insulation crimps easily and comfortably within a few minutes. After cutting, polishing and etching of the sample, the image of the cross section can be visualized on the screen. Now a comprehensive quality check of the crimp can be performed by using the special designed image processing software X-Scan.

The **Microlab ML 3600** is the ideal tool to conduct quality tests in a quick and economic way. The proven 4x zoom optics is easy to use and delivers very good digital colour pictures. For the analysis, you use the innovative and comfortable image processing software X-Scan which of course fulfills all relevant DIN standards and OEM specifications. Automatically generated records can be used as proofs of quality.
